in a marmoleum® *click* minute

Marmoleum® click is an ecologically produced, natural linoleum on HDF with a cork layer, that comes in approx. sizes of 12" x 36" panels and 12" x 12" squares.

Marmoleum click is a high-quality product and the ideal flooring for most rooms in the house, from the hallway, kitchen and children's rooms, where traffic is likely to be heaviest, to the living room, study or bedroom.

This natural, stylish flooring is easily installed and maintained. With the freedom to design your own patterns, you can create your own atmosphere. Enjoy the feeling of having it your way. That's Marmoleum click.

Easy to Install

Marmoleum® click panels are easy to install. With a simple "In & Out" system, the panels simply "click" into place. And, no glue is required, so the floor can be walked on immediately after installation.

Anti-static for Easy Cleaning

The anti-static properties mean that dust won't cling to it. Keeping your Marmoleum click dust free is easily achieved by dust mopping and damp mopping.

Health & Hygiene

Because it is so easy to clean, Marmoleum click makes life easier for people with asthmatic allergies and other respiratory disorders. Marmoleum click does not harbor dust mites and lab tests show that Marmoleum click is bacteriostatic, so micro-organisms don't stand a chance. Use Marmoleum click for a healthy, hygienic home.

Warmth & Peace

Because Marmoleum is a natural product like wood, it makes your house snug and warm. It reaches room temperature quickly and can even be used with under-floor heating. Do note, however, that the flooring

construction will limit heat transfer.

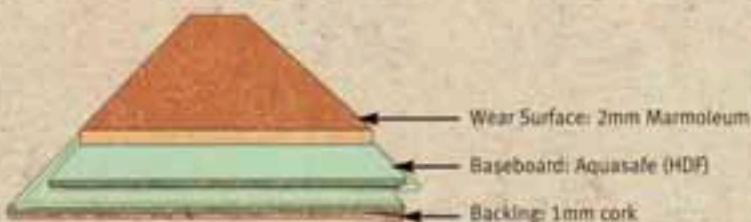

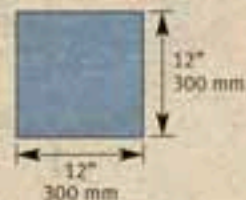

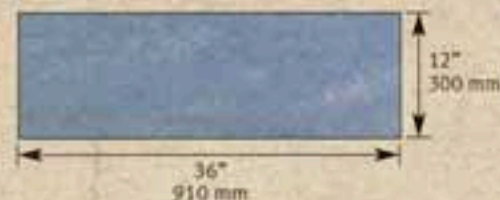

Ambering

Marmoleum's most desirable performance attributes (durability, anti-static and hygienic properties) are the result of the continued oxidation of the linseed oil over its life.

During the manufacturing process this oxidation may result in a yellowish cast, known as ambering, visible on the product when it is initially taken out of its package. The visual yellowing only **TEMPORARY**.

When exposed to light, the ambering disappears. The process may take only a few hours in bright sunlight but longer with artificial light. Applying a finish over the ambering makes **NO** difference – it will dissipate with exposure to light.

Marmoleum's "natural" story

Marmoleum® click has a top layer of natural Marmoleum Ingredients. The main ingredient is natural linseed oil produced by pressing the seeds from the flax plant. The flax plant, the source for linen, is an easy-to-cultivate plant whose supply is abundant. Pine rosins are mixed with the linseed oil to produce a flexible binder. The pine trees from which the rosins are extracted exist in abundance throughout the world. Wood flour is obtained through controlled forestry, including the planting of special forests. No tropical hardwoods are ever used. When it comes to our beautiful colors, only ecologically friendly pigments are used. The backing used for Marmoleum is made from spun yarn of strong jute fiber, grown primarily in India and Bangladesh. Jute is plentiful and highly renewable.
